| Wirt                     | Goat                                                                                                                                                                                                                                                           |
| Kategorie                | Antikörper                                                                                                                                                                                                                                                     |
| Produktbeschreibung      | The reactivity of the antiserum is restricted to alpha-1 lipoprotein. In immunoelectrophoresis and radial immunodiffusion (Ouchterlony), using various antiserum concentrations against fresh normal human plasma a single precipitin line is obtained whi...  |
| Klonalität               | Monoclonal                                                                                                                                                                                                                                                     |
| Klon-Bezeichnung         | [Polyclonal]                                                                                                                                                                                                                                                   |
| Puffer                   | Delipidated, heat inactivated, lyophilized, stable whole antiserum No preservative added. Total protein and IgG concentrations in the antiserum are comparable to those of pooled normal goat serum. No foreign proteins added.                                |
| Quelle                   | Alpha-1 lipoproteins are completely different from beta-lipoproteins. In fresh serum only one alpha-1 lipoprotein exists immunologically, but after centrifugation, storage, freezing and thawing two types of alpha-1 lipoprotein with difference in mobility |

|                        |                                                                                                                                                                                                                                                             |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Formel                 | Delipidated, heat inactivated, lyophilized, stable whole antiserum No preservative added. Total protein and IgG concentrations in the antiserum are comparable to those of pooled normal goat serum. No foreign proteins added.                             |
| Anwendungsbeschreibung | Precipitation assays. The lyophilized antiserum is shipped at ambient temperature and may be stored at +4C, prolonged storage at or below -20C. Reconstitute the lyophilized antiserum by adding 1 ml sterile distilled water. Dilutions may be prepared by |
