| Produktbeschreibung      | In immunoelectrophoresis against fresh mouse serum, a single precipitin line is obtained in the beta-1 region representing native C3. Against serum containing partly activated C3, a precipitin line is obtained which extends from the beta-1 into the a...  |
| Klonalität               | Monoclonal                                                                                                                                                                                                                                                     |
| Klon-Bezeichnung         | [Polyclonal]                                                                                                                                                                                                                                                   |
| Puffer                   | Delipidated, heat inactivated, lyophilized, stable whole serum. No preservative added. Total protein and IgG concentrations in the antiserum are comparable to those of normal pooled goat serum. No foreign proteins added. Reconstitute the lyophilized anti |
| Quelle                   | C3 is the most abundant complement protein in mouse serum. Its biological function strongly resembles that of C3 in man and other laboratory animal species. It has a central role in the activation system being common to both pathways. Activation of C3 is |

Anwendungsbeschreibung

Precipitation assays. In immunoelectrophoresis use 2  $\mu$ l mouse plasma or equivalent against 120  $\mu$ l antiserum. In double radial immunodiffusion use a rosette arrangement with 10  $\mu$ l antiserum in 3 mm diameter center well and 2  $\mu$ l plasma samples (neat and se
