| Produktbeschreibung      | Cellular uptake of iron occurs via receptor-mediated endocytosis of ligand-occupied transferrin receptor into specialized endosomes. Endosomal acidification leads to iron release. The apotransferrin-receptor complex is then recycled to the cell surfa... |
| Klonalität               | Polyclonal                                                                                                                                                                                                                                                    |
