| Produktbeschreibung      | Mouse IgA (immunoglobulin A) is a glycosylated protein of 160 kDa and is produced as a monomer or as a J chain-linked dimer. Monomeric IgA constitutes 5-15 % of the serum immunoglobulins whereas dimeric IgA is localized to mucosa surfaces such as sal... |
| Klonalität               | Polyclonal                                                                                                                                                                                                                                                    |
| Konzentration            | 1ug/ul                                                                                                                                                                                                                                                        |
| Puffer                   | Aqueous buffered solution containing 0.01M TBS (pH 7.4) with 1% BSA, 0.02% Proclin300 and 50% Glycerol.                                                                                                                                                       |
| Quelle                   | Mouse IgA protein purified from serum                                                                                                                                                                                                                         |

|                        |                                                                       |
|------------------------|-----------------------------------------------------------------------|
| Reinheit               | affinity Purified by Protein A.                                       |
| Target-Kategorie       | Mouse IgA                                                             |
| Application Verdünnung | WB(1:300-5000), ELISA(1:500-1000), IHC-P(1:200-400), IHC-F(1:100-500) |
