| Category                   | Proteine/Peptide                                                                                                                                                                                                                                                 |
| Product Description        | GBA (glucosylceramidase) is a lysosomal enzyme that degrades lipids and aids in cell membrane turnover. It hydrolyzes glucosylceramide to form ceramide and glucose.<br>GBA/Glucosylceramidase Protein, Human (HEK293, His) is the recombinant human-derived ... |
| Molecular Weight           | 60-70 kDa                                                                                                                                                                                                                                                        |
| Purity                     | 95                                                                                                                                                                                                                                                               |
| Formula                    | 2629(Gene_ID)P04062/NP_000148.2 (A40-Q536)(Accession)                                                                                                                                                                                                            |
| Application Notes          | Recombinant Proteins                                                                                                                                                                                                                                             |
