Application Notes

This Human Mesoderm posterior protein 2 (MESP2) ELISA Kit employs a two-site sandwich ELISA to quantitate MESP2 in samples. An antibody specific for MESP2 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and anyMESP2 present will react with the antibody on the microplate wells. Any unbound, free MESP2 will be washed away and only the MESP2 that is bound to the antibody on the microplate wells will remain. This MESP2-antibody complex will then be detected by a second antibody that is specific for MESP2 and is conjugated with a colorimetric substrate. The color change is proportional to the amount of MESP2 in the sample.
