Application Notes

This Human Mesoderm posterior protein 1 (MESP1) ELISA Kit employs a two-site sandwich ELISA to quantitate MESP1 in samples. An antibody specific for MESP1 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and anyMESP1 present will react with the antibody on the microplate wells. After washing away unbound antibodies, only MESP1-antibody complexes remain bound to the wells. Addition of enzyme-labeled anti-MESP1 antibody will bind to the MESP1-antibody complexes. Addition of the substrate will produce a color change proportional to the amount of MESP1 in the sample.
