| Product Description        | Erythromycin-d3 A 9-Oxime is an isotope labelled derivative of Erythromycin A 9-Oxime (E6500010), the major metabolite of roxithromycin (R700850). Molecular Formula: C <sub>37</sub> H <sub>65</sub> D <sub>3</sub> N <sub>2</sub> O <sub>13</sub><br>Solubility: Chloroform, Methanol Molecular Weight: 751.96 Storage and ... |
| Molecular Weight           | 751.96                                                                                                                                                                                                                                                                                                                           |
| Form                       | Supplied as a White Solid                                                                                                                                                                                                                                                                                                        |
